

FEATURES

- **NEMA Weatherproof Design**
- **Compact Size**
- **Plumb, Plug & Play (LCX-1102 Only)**
- **Low Power Consumption**
- **Low Maintenance**
- **No Wall Holes To Drill**
- **Pole Mount Option**
- **1 Year Limited Warranty**
- **Easy Read Indicators**
- **Compatible With Older Systems**

Get Peace of Mind!

No other filling system is able to function properly in rough waters like Level Waters systems do. Our process took years of design engineering to overcome the problems associated with moving water in ponds. Other systems cost more and require the sensor be mounted in a calm area. Our system sensors last for years. Other system sensors break down and require frequent replacements.

For further information visit us on the web at www.aquilitysystems.com, contact your local distributor or call (352) 332-1549.

Options Available

- ✚ MNT-X Garden Pole Mount - Allows mounting to a pole.
- ✚ Manual Fill Switch - Good for forced fills or testing.

Outdoor Controllers

Power & Versatility

The Modern Filling Solution

Your pond demands the Best!

Level Waters™ LCX-11 series of outdoor controllers offer the best solution to ponds that are located at a distance from structures able to protect the controller from weather. Since many ponds are not near a structure that can provide the protection needed by our LCS Series controllers, the LCX-11 series make it possible to install a system anywhere power can be run to the site.

VERSITILITY AND RELIABILTY

Two versions of the LCX-11 series of outdoor controllers are available; the LCX-1101 and LCX-1102. They offer total versatility to the already popular line of automated leveling systems.

The **LCX-1101** is designed for professional installation and requires protected wiring of both the power and control cables. It offers selectable 115/230 VAC power input via either ½" 'liquidtite' or solid PVC conduit. Control wiring is supplied through a weather-resistant 3/8" NPT cable-mount connector.

The **LCX-1102** is the '**Plumb, Plug & Play**' version of the LCX outdoor controllers and requires no wiring. Power is supplied through a 2' standard 3-prong power cable. Control wiring is supplied through a weather-resistant cam-lock connector making it simple to install.

LCX-1101 Connections

LCX-1102 Connections

Almost No Maintenance

Other than periodically changing the system's alarm battery, the LCX-11 series outdoor controllers require absolutely no maintenance; just mount and enjoy the benefits of an automated filling system.

You deserve to be free to enjoy your pond! Dragging hoses around and cleaning old float valve systems are obsolete in today's world of personal requirements and responsibilities. The *Level Waters™* LCX-11 Series of controllers give you the time to finally enjoy your pond or watergarden!

ECONOMICALLY COMPATIBLE

Level Waters™ LCX-11 Series of outdoor controllers offer compatibility with our indoor systems and add economy of upgrade capability for a dependable system tailored to your needs. Both systems are flush mountable and can be pole mounted with MNT-X option.

The LCX-11 Series Controllers are available in four system configurations:

- ◆ XLS-1221 Plumb, Plug & Play ½" Water Feed
- ◆ XLS-3421 Plumb, Plug & Play ¾" Water Feed
- ◆ XPS-3411 Pro Install ¾" Water Feed
- ◆ XPS-1011 Pro Install 1" Water Feed
