

Level Waters™

AUTOMATIC WATER LEVELING SYSTEMS

The Modern Filling Solution

Precise
Powerful
Practical

dependable electronic auto-fill systems with a wide variety of features. All systems use a **patent-pending** sensing method that uses **no moving parts**. Systems come in 3 categories: indoor, outdoor and economy. **Indoor systems** (LCS Models) are **Plumb, Plug & Play™** and are available in two fill sizes and controller colors:

Model	Fill Volume	Control Colors
LCS-0901	8 Gallons Per Min.	Bone, Black
LCS -3401	15 Gallons Per Min.	Bone, Black

Outdoor systems (XLS & XPS Models) are available in two main configurations: **Plumb, Plug**

& Play™ and Pro-Install. Pro-Install systems require a basic knowledge of wiring and require installation in accordance with national and local electrical codes. Outdoor controllers may be mounted to any flat surface or pole mounted with optional MNT-GP garden pole mount.

Indicators

All systems (except EasyFill™) come with high visibility indicators for Power, Alarm and Fill functions.

Model	Fill Volume	Configuration	Control Colors
XLS-1221	8 Gallons Per Min.	Plumb, Plug & Play™	Beige
XLS -3421	15 Gallons Per Min.	Plumb, Plug & Play™	Beige
XPS-3411	15 Gallons Per Min.	Pro-Install	Beige
XPS-1011	30 Gallons Per Min.	Pro-Install	Beige

Plumb, Plug & Play™

The **Level Waters™** exclusive Plumb, Plug & Play™ feature makes installation a breeze. All electrical connections are made through easy cam-lock connections. Just mount, plumb and connect! Anyone can do it. No other professional system offers this feature. All systems come standard with a 15' control cable and 25' sensor cable. All cables are made of UV resistant insulation. An optional 25' sensor extension cable is available.

The **EasyFill™** economy auto-fill provides basic reliable filling and comes either as a system (MLS-3401) or as a standalone sensing unit (MC-01) requiring separate purchase of a power supply and valve.
